Date: May 1, 2004

**Subject: ELECTRIC RATES**

Rate Schedules are available at the HPUC offices. They are based upon the HPUC's production and distribution facilities that are sufficient for save, proper, and adequate service.

Rates apply only to Standard Service, namely, alternating current of 60 hertz frequency at designated standard nominal voltages. The HPUC may require agreements for longer terms than specified in the Rate Schedule, may require contributions toward the investment, and may establish minimum charges and facilities charges in the following circumstances:

- 1) When large or special investment is necessary for the supply of electrical service.
- 2) When oversized transformers, feeders, or other special facilities are installed to serve a customer using equipment in such manner that use of electric service is intermittent or subject to violent fluctuations.
- 3) When the capacity required to serve a customer's equipment is out of proportion to the use of electric service for occasional, intermittent, momentary short duration, or low load factor purposes.
